Professional Profile

Full stack developer with experience in web and mobile applications, backend, frontend, QA, geographic data, maps, CRMs, service integrations, and deployment of production solutions. I specialize in identifying bugs, functional gaps, anti-patterns, and technical risks that can scale as a system grows, especially in communication and interoperability between frontend and backend. I have worked with FastAPI, Python, Flutter, Next.js, Django, NestJS, PostgreSQL, MongoDB, Redis, Prisma, Docker, Vercel, and integrations such as Culqi, MUX, Google OAuth, and UploadThing. I am characterized by turning cross-area requirements into concrete, stable, optimized, and sustainable features.

Work Experience

Full Stack Developer

Aug. 2025 – Present

Navia

Remote

- Implemented web and administrative solutions for different business processes, participating in frontend, backend, data, deployments, and technical support.
- Worked with geographic data, map creation and manipulation, landing pages, frontend components, and basic administrative CRMs.
- Participated in Zefiron, a real estate CRM developed with Flutter, Python, FastAPI, PostgreSQL, Redis, and Docker.
- Implemented relationship and information consolidation features across several tables, improving data consistency, performance, and user experience.
- Identified and resolved bugs, potential failures, and conflicting anti-patterns in frontend-backend interoperability, proposing comprehensive, stable, and sustainable improvements.
- Supported deployments and basic server management, including configuration, maintenance, and publication of services in production environments.
- Coordinated with different areas to understand requirements, translate them into technical solutions, and ensure features correctly addressed real business needs.

Freelance Full Stack Developer

Apr. 2025 – Present

Depromine EIRL

Remote

- Designed and developed an end-to-end LMS platform for mining courses, built with Next.js, MongoDB, Prisma, and deployed on Vercel.
- Implemented modules for courses, students, teachers, evaluations, certificates, payments, promotions, resources, complaints book, and content configuration.
- Developed a CMS-style administrative dashboard with metrics, sales, users, courses, evaluations, certificates, claims, and student progress.
- Integrated Culqi, MUX, UploadThing, Google, role-based authentication, and permissions for students, administrators, and teachers.
- Designed the system architecture, database, and modular structure, prioritizing stability, maintainability, and low operating cost.
- Production platform with 6 launched courses, nearly 30 screens across 10 modules, and high-demand periods of approximately 800 daily users.

Freelance Backend Developer

Nov. 2024 – Feb. 2025

Currency exchange sector client

Remote

- Collaborated on improving an existing platform for currency exchange operations, working mainly on backend with Django and database tasks.
- Fixed errors and implemented forms, CRUDs, automations, administrative modules, and Google OAuth integration.
- Made targeted React adjustments and supported basic deployment, maintenance, and system stabilization tasks on the server.

Application Developer

Mar. 2023 – Mar. 2024

Innova ECG

Lima, Peru

- Developed mobile and web applications using Android, Flutter, NestJS, and Django, participating in backend, frontend, and end-user support features.

- Led QA activities: design, execution, and follow-up of software quality tests for internal systems and production products.
- Designed databases with geospatial features and participated in deployments, debugging, and bug fixing.

Development and QA Intern

Innova ECG

Nov. 2022 – Feb. 2023

Lima, Peru

- Executed functional tests, documented incidents, and supported fixes in Angular, NestJS, Django, and Flutter.

Development Intern

IdeasCloud

Dec. 2021 – Feb. 2022

Lima, Peru

- Participated in the development of a mobile application with React Native integrated with the company API and supported client communication.

Education

TECSUP

2020 – 2022

Technical Professional in Software Design and Development

Training focused on application development, creation of computer systems, and software engineering fundamentals.

Technical Skills

Languages	JavaScript, Dart, Kotlin, SQL
Frontend and mobile	Next.js, React, React Native, Flutter, Android, SwiftUI, Angular
Backend	Python, FastAPI, Node.js, Express, NestJS, Django, REST APIs, authentication, OAuth
Databases	PostgreSQL, MongoDB, MySQL, SQLite, Redis, Prisma, data modeling, geospatial functions
Integrations	Culqi, MUX, UploadThing, Google OAuth, Google Forms
DevOps and QA	Docker, Docker Compose, Vercel, basic servers, deployments, debugging, functional testing, software quality assurance
Specialization	Maps, geographic data, CRMs, optimization, frontend-backend interoperability, detection of bugs and anti-patterns
Methodologies	Scrum, technical leadership, cross-area communication, requirements gathering, end-user support

Languages and Tools

Languages	Intermediate English
Office tools	Intermediate Excel
Availability	Evenings

Soft Skills

- Teamwork, clear communication, and willingness to learn new technologies.
- Problem-solving with a practical, organized approach focused on good practices.
- Ability to detect technical risks, hidden failures, and scalability issues before they affect the end user.
- Ability to gather requirements, coordinate with different areas, propose technical solutions, and turn business needs into features.
- Responsibility, professional honesty, and openness to take on technical challenges.
